(a) survival of the seeded replicator
runs (%)
fraction of long-range interactions p
(b) time to take over the grid
50% of the programs
90% of the programs
epochs
fraction of long-range interactions p
(c) spatial structure at the end
neighbour excess similarity
fraction of long-range interactions p
(d) diversity at the end
effective number of variants
fraction of long-range interactions p
(e) spontaneous transitions
well-mixed, same size
grid
runs with a transition (%)
fraction of long-range interactions p
(f) median self-replicators over time
programs (%)
epoch
